ObjectDataSource - ObjectDataSource1

ObjectDataSource Tasks

- Configure Data Source...
- Refresh Schema

Configure Data Source - ObjectDataSource1

**Choose a Business Object**

Select a business object that can be used to retrieve or update data (for example, an object defined in the Bin or App_Code directory for this application).

Choose your business object:

Linq.emp

☐ Show only data components

< Previous

Next >

Finish

Cancel

Name: Rajvardhan Ganpatrao Patil
Roll No: 40 Div: A

Configure Data Source - ObjectDataSource1

 **Define Data Methods**

SELECT UPDATE INSERT DELETE

Choose a method of the business object that returns data to associate with the SELECT operation. The method can return a DataSet, DataReader, or strongly-typed collection.

Example: GetProducts(Int32 categoryId), returns a DataSet.

Choose a method:

GetIEmployees(), returns List<emp>

Method signature:

GetIEmployees(), returns List<emp>

< Previous Next > Finish Cancel

Output:

ID	Name	Department	Salary
1	Amol Nikam	IT	600000
2	Rajvardhan Patil	IT	70000
3	Avishkar Patil	IT	80000

Name: Rajvardhan Ganpatrao Patil
Roll No: 40 Div: A
